Mechanism

$$A_{ca} \approx 5 \times A_{al}$$

The air-contact area of ceramic heat spreader is nearly 5 times of aluminum heat sink, under the same volume. In the same condition of air flow rate, ceramic heat spreaders can perform better. The more contact areas, the more heat can be exchanged by the cooler air.

$$Q_t \propto S \times A$$

Qt: The heat would be taken by air flow.

S: Air flow(m/s) A: Air contact area (m²)

Aca: Air contact (m²) of ceramic heat sink

Aal: Air contact (m²) of aluminium heat sink
